

Hey, Analyze this hostel complaint data. Find the total complaints, most common problems, complaints by block and resolved complaints. Give the key findings and recommendations." Identify the total number of complaints, most common problems, complaints by block, assigned-person workload, and resolved/pending complaints. Present the results clearly in tables and provide a short summary. Do not assume or invent any information.

I can analyze it exactly, but the full hostel complaint data is not available in this chat. I only have the sample rows you previously mentioned, which is not enough to calculate reliable totals.

Please upload the Excel/CSV file or a clear screenshot/PDF of the complete table.

Once you provide it, I'll calculate only from the actual data:

8:46 have the sample rows you previously mentioned which is not enough to calculate reliable totals.

Please upload the Excel/CSV file or a screenshot/PDF of the complete table.

Once you provide it, I'll calculate only from the actual data:

Analysis	Result
Total complaints	Exact count
Most common problems	Problem + number of complaints
Complaints by block	Block + complaint count
Assigned-person workload	Person + number assigned
Resolved complaints	Exact count
Pending complaints	Exact count

Short summary

I'll also give you a concise Key Findings & Recommendations section suitable for your Excel project/presentation, without assuming or inventing any values.
